EDUCATION

Illinois Institute of Technology

B.S., Information Technology and Management

GPA: 3.93/4.00

Chicago, IL

Expected May 2027

Stony Brook University (SUNY Korea)

Undergraduate Studies, Technology Systems Management

Incheon, South Korea

2020-2022

HONORS & AWARDS

Honor Marshal, Illinois Institute of Technology

Dean's List, Illinois Institute of Technology

Merit-Based Scholar, Stony Brook University

Dean's List, Stony Brook University

2026

2025-2026

2022

2020-2022

RESEARCH EXPERIENCE

Undergraduate Researcher

Illinois Institute of Technology – Advisor: Prof. Yibo Hu

May 2026-Present

Chicago, IL

Evaluating LLM Decision-Making Under Temporal Uncertainty in OTC Dosing QA

- Lead the ongoing extension of DoseBench, a benchmark for evaluating trustworthy LLM decision-making under temporal uncertainty, incomplete context, and rule-based constraints.
- Design a scalable data pipeline, structured gold-annotation guidelines, and evaluation rubrics for decision correctness, ambiguity handling, reasoning verifiability, and failure-mode analysis.
- Implement an evaluation framework using repeated sampling, majority-vote accuracy, consistency, token-level confidence, entropy, and decision margins across four instruction-tuned LLMs.
- Analyze systematic reliability failures in which models produce consistent and highly confident yet incorrect or unsupported decisions.
- Use Jetstream2 to run multi-core parallel data-processing workflows over large-scale Reddit datasets and manage shared research storage.
- Co-author a manuscript for submission to EMNLP 2026.

Researcher

Chung-Ang University and Union Contents

Aug 2023-Sep 2024

Seoul, South Korea

Application Distribution Tracking via Embedded Metadata

- Developed a software-based identification approach for tracing unauthorized distribution of applications by embedding encrypted identifiers in official application metadata.
- Built Python web crawlers for evidence collection and a React/TypeScript dashboard for centralized inspection and analysis of collected records.
- Prepared weekly technical research reports and collaborated across academic and industry stakeholders.

PROFESSIONAL EXPERIENCE

Union Contents

Aug 2022-Sep 2024

Researcher & Front-End Developer, Full-time | Seoul, South Korea

- Led the front-end redesign and redevelopment of AUTOGREEN within a two-person front-end team, delivering a faster and more maintainable production web application.
- Implemented end-to-end functionality for AUTOGREEN and MOVIEBOARD, including authentication, administrative dashboards, search, CRUD operations, API integration, filtering, and interactive data visualization.
- Improved loading performance and reduced redundant server requests by applying page-specific rendering strategies, building reusable components, and centralizing API responses in shared application state using the React Context API and Zustand.
- Conducted data collection, technical feasibility analysis, and early-stage product design for MYSO.
- Collaborated within a two-person front-end team and with three back-end engineers to translate product and research requirements into deployable web applications.

SELECTED TECHNICAL PROJECTS

Practo: AI-Powered Healthcare Appointment Platform

Fall 2025

Grainger Computing Innovation Prize, Illinois Institute of Technology

- Refactored and expanded the front end of an AI-powered doctor appointment platform, improving code maintainability and interface consistency while completing unfinished user workflows.
- Implemented missing application pages and completed unfinished user flows as part of a team that advanced to Round 2 of the competition.

BREEDGE — Ethical Dog Adoption and Breeder Education Platform

Founding Team Member | K-Startup 2026 Student League | 2024–Present

- Conduct customer-discovery interviews and field research to identify trust, accessibility, and post-adoption support challenges within Korea's dog-adoption ecosystem.
- Develop a platform concept combining verified breeder profiles, breed-specific education, adopter compatibility matching, and post-adoption support.
- Selected for the 2026 Student Startup Team 300+ after advancing through document and presentation evaluations.

Digital Map Project

Fall 2021

Stony Brook University (SUNY Korea) – Advisor: Prof. Neal Dreamson

- Collaborated with the Incheon municipal government to plan a digital map of Myanmar-operated businesses and community resources; contributed to dataset construction, map development, and presentation preparation.

LEADERSHIP & COMMUNITY ENGAGEMENT

Technology Systems Management Senator

Fall 2020-Spring 2021

Stony Brook University (SUNY Korea)

- Represented students in the major, planned student-government events, and led design, production, and distribution of department apparel.

STEAM Mentor

Fall 2021-Spring 2022

Stony Brook University (SUNY Korea)

- Taught elementary school students foundational programming concepts and computational logic through hands-on block-based coding activities.

TECHNICAL SKILLS

Programming: Python, JavaScript, TypeScript, Java, Dart, SQL

Frameworks & Tools: React, Next.js, Flutter, Git, Ansible, Prometheus, Grafana

Research Methods: Large-scale data processing, web crawling, rule-based filtering, LLM-assisted annotation, quality auditing

Computing: Jetstream2, Linux, Docker
